

InfraMitra

Complete Infrastructure Lifecycle Curriculum

From Unpacking → Deployment → Operations → Upgrades → Maintenance → Dismantling → Packing

InfraMitra is designed as a complete infrastructure lifecycle immersion program. Students experience the full operational lifecycle of enterprise infrastructure environments.

The program begins from: receiving and unpacking equipment physical identification of components rack assembly and deployment operations and monitoring maintenance and upgrades incident handling and troubleshooting safe dismantling and packing procedures

1. Complete Infrastructure Lifecycle Model

Lifecycle Stage	Practical Exposure
Receive & Unpack	Equipment handling, unpacking procedures, inspection, inventory verification
Identify	Physical identification of racks, servers, switches, UPS, PDUs, patch panels, cables
Assemble	Rack assembly, mounting rails, equipment positioning
Cable & Connect	Structured cabling, fiber routing, labeling, power connections
Deploy	Server installation, switch setup, connectivity validation
Configure	Basic operating systems, remote access, monitoring tools
Operate	Operational workflows, SOPs, monitoring dashboards
Monitor	Power, cooling, alerts, incidents, environmental systems
Maintain	Preventive maintenance, cleaning, cable management
Upgrade	Hardware replacement, firmware/software updates
Troubleshoot	Operational incidents, diagnostics, escalation workflows
Document	Asset tagging, diagrams, operational documentation
Dismantle	Safe shutdown, hardware removal, cable removal
Pack & Store	Packing procedures, inventory closure, transport readiness

2. Detailed Weekly Curriculum

Week 1 — Receiving, Unpacking & Infrastructure Identification

- Receiving enterprise infrastructure equipment
- Safe unpacking procedures
- Inventory verification and tagging
- Understanding packaging and transport considerations
- Identifying racks, UPS, PDUs, switches, servers
- Fiber and structured cabling identification
- Cooling systems and airflow awareness

Week 2 — Rack Assembly & Physical Infrastructure Setup

- Rack assembly procedures
- Mounting rails and equipment brackets
- Server positioning and installation
- Switch mounting
- Cable tray awareness
- Power distribution concepts

Week 3 — Structured Cabling & Connectivity

- Cat6/Cat6A termination
- Fiber patching
- Patch panel operations
- Cable routing and labeling
- Cable management standards
- Power cabling discipline

Week 4 — Infrastructure Deployment & Configuration

- Server deployment workflows
- Basic BIOS configuration
- Basic operating system installation
- Console connectivity
- Remote management interfaces
- Basic switch connectivity validation

Week 5 — Operations & Monitoring

- Monitoring dashboards
- Environmental monitoring
- Operational SOPs
- Shift discipline
- Incident alert awareness
- Infrastructure health checks

Week 6 — Maintenance, Upgrades & Troubleshooting

- Preventive maintenance
- Replacing hardware components
- Firmware and software updates
- Cable optimization
- Operational troubleshooting
- Incident escalation workflows

Week 7 — Documentation & Operational Readiness

- Asset tracking
- Rack diagrams
- Infrastructure documentation
- Operational reporting
- Capacity awareness
- Infrastructure lifecycle management

Week 8 — Safe Dismantling, Packing & Closure

- Safe shutdown procedures
- Cable removal

- Hardware dismantling
- Rack decommissioning
- Packing procedures
- Inventory closure
- Transport readiness and storage discipline

3. Hardware Exposure

- Enterprise racks
- Servers
- Switches
- Patch panels
- Fiber infrastructure
- Cat6/Cat6A cabling
- UPS systems
- PDUs
- Monitoring systems
- Environmental systems
- Console access tools

4. Software & Operational Exposure

- Monitoring dashboards
- Asset tracking systems
- Documentation workflows
- Remote management interfaces
- Alert systems
- Operational SOP awareness
- Basic DCIM exposure

5. Included Laptop & Technician Toolkit

Item	Purpose
Pre-configured Laptop	Infrastructure operations and tooling
Cable Tester	Structured cabling diagnostics
Crimping Tools	Cable preparation
Fiber Cleaning Kit	Fiber maintenance
Console Adapters	Server/switch access
Labeling Tools	Documentation and operations
Basic Technician Toolkit	Deployment and maintenance tasks

6. Strategic Differentiation

Unlike traditional certification-focused programs, InfraMitra focuses on complete infrastructure operational lifecycle exposure.

Students physically experience: unpacking and receiving equipment infrastructure assembly deployment workflows operations and monitoring maintenance and upgrades incident handling safe dismantling and packing
The objective is to create deployment-ready infrastructure workforce aligned with India's expanding AI and data center ecosystem.
